

Annex 9.5

QS-list of feed materials

The following feed materials can be produced and marketed as QS goods by QS certified feed material producers.

For the participation in the QS Feed Monitoring, it is indicated for each feed material which table of the Feed Monitoring Guideline is to be applied, whether a control plan has to be requested at QS or positive release sampling has to be carried out for the product. In addition to the control plans in the Guideline Feed Monitoring, the additional control plan Aflatoxin B1 may apply to maize and processed maize. Further information can be found in the Guideline **Feed Monitoring** and in the **Annex 8.5 Additional control plans** to the Guideline Feed Monitoring.

Note: *Drying plants that dry primary agricultural products and feed as a service must comply with Table 43 of the Guideline Feed Monitoring.*

Note: *In the QS-list of feed materials, feed materials can be included which are listed in the EU catalogue of feed materials (Regulation (EU) No. 68/2013), the Positive List for Straight Feeding Stuffs of the Standards Commission at the Central Committee of the German Agriculture or the corresponding lists of QS-recognised standard owners. The inclusion in the QS-list of feed materials can be requested at the QS head office.*
